

CLAIMS

What is claimed is:

- 5 1. A novel combined cup which is comprised of; 1) a bowl-shaped upper cup body with a tube-type opening for a straw at the edge of the bottom, which has an outer diameter of the same size as the inner diameter of the upper opening of the lower cup body, with an additional rim folded outward and with a groove for an "O" ring along
10 the outside of the bottom; 2) a lower cup body; 3) an insulating plate with an opening at the edge for straw insertion; 4) an "O" ring engaged on the groove developed along the outside of the bottom; and, 5) a lid cover for the upper cup body with a circular projection which has the same inner diameter as the outer diameter of the bottom of
15 lower cup body.
2. An upper cup body, in Claim 1, with a bottom coated with silicon rubber.
